

# Summary

- Fieldwork: Conducted 3 experiments in Vietnam, but the experiment on larvae was failed so that data collected only from juvenile experiments.
- Labwork: Molecular analysis in MDB lab in UiB
- Writing: **Neuroendocrine control of appetite in clown anemonefish, *Amphiprion ocellaris*, exposed to elevated temperature and restricted feeding** – submitted
- Courseworks:
  - Data exploration, regression, GLM&GAM with introduction to R
  - PhD for Innovation: Interdisciplinary problem solving and creativity
  - How to publish in peer-reviewed journals
- Conference:
  - Delivering an oral presentation of experiment results at SEB annual meeting in Seville July 2019

Linh delayed the time arriving Norway from January 2018 to May 2018 to finish all experiments delaying due to the effect of Typhoon 2017.

Her staying in Norway has been extended to complete all the labwork and writing. She herself has faced a challenge in conducting experiment, analysing the data and writing. She may need to extend the time to 2020 for preparing for thesis defense.
